

Ikarus::KirchhoffLoveShell
::calculateMatrixImpl

Ikarus::KirchhoffLoveShell
::calculateScalarImpl

Ikarus::KirchhoffLoveShell
::calculateVectorImpl

Ikarus::KirchhoffLoveShell
::displacementFunction

```
graph LR; A["Ikarus::KirchhoffLoveShell::calculateMatrixImpl"] --> D["Ikarus::KirchhoffLoveShell::displacementFunction"]; B["Ikarus::KirchhoffLoveShell::calculateScalarImpl"] --> D; C["Ikarus::KirchhoffLoveShell::calculateVectorImpl"] --> D;
```

The diagram illustrates a design pattern where three separate implementation methods (calculateMatrixImpl, calculateScalarImpl, and calculateVectorImpl) all delegate their logic to a single, central method (displacementFunction). This central method is highlighted with a gray background, indicating its role as a unified interface or a core component that these other methods rely on.
