

Ikarus::utils::globalIndex  
FromGlobalPosition

Ikarus::utils::obtainLagrange  
GlobalNodePositions

Ikarus::utils::forEachLagrange  
NodePosition

```
graph LR; A[Ikarus::utils::globalIndex<br/>FromGlobalPosition] --> C[Ikarus::utils::forEachLagrange<br/>NodePosition]; B[Ikarus::utils::obtainLagrange<br/>GlobalNodePositions] --> C;
```

The diagram illustrates a flow where two separate inputs on the left converge into a single output on the right. The first input box, 'Ikarus::utils::globalIndex FromGlobalPosition', and the second input box, 'Ikarus::utils::obtainLagrange GlobalNodePositions', both have blue arrows pointing towards the central box 'Ikarus::utils::forEachLagrange NodePosition'. The central box is shaded gray, while the input boxes are white with black borders.
