

Ikarus::ArcLength::
initialPrediction

```
graph LR; A["Ikarus::ArcLength::  
initialPrediction"] --> B["Ikarus::createSPDLinearSolver  
FromNonLinearSolver"]
```

A diagram showing a call to the `createSPDLinearSolver` function from the `NonLinearSolver` class. The call is initiated by the `initialPrediction` method of the `ArcLength` class. The diagram consists of two rectangular boxes connected by a blue arrow pointing from left to right. The left box is white with a black border and contains the text `Ikarus::ArcLength::initialPrediction`. The right box is gray with a black border and contains the text `Ikarus::createSPDLinearSolver` and `FromNonLinearSolver` on two lines.

Ikarus::createSPDLinearSolver
FromNonLinearSolver
