

Ikarus::utils::globalIndex
FromGlobalPosition

Ikarus::utils::obtainLagrange
GlobalNodePositions

Ikarus::utils::forEachLagrange
NodePosition

```
graph LR; A[Ikarus::utils::globalIndex<br/>FromGlobalPosition] --> C[Ikarus::utils::forEachLagrange<br/>NodePosition]; B[Ikarus::utils::obtainLagrange<br/>GlobalNodePositions] --> C;
```

The diagram illustrates a data flow where two separate input operations feed into a single processing step. The first input, 'Ikarus::utils::globalIndex FromGlobalPosition', and the second input, 'Ikarus::utils::obtainLagrange GlobalNodePositions', both point via blue arrows to the central box 'Ikarus::utils::forEachLagrange NodePosition'. The central box is shaded gray, while the input boxes are white with black borders.
