

Ikarus::NonLinearElastic
::calculateMatrixImpl

Ikarus::NonLinearElastic
::calculateVectorImpl

Ikarus::NonLinearElastic
::stress

```
graph LR; A["Ikarus::NonLinearElastic::calculateMatrixImpl"] --> C["Ikarus::NonLinearElastic::stress"]; B["Ikarus::NonLinearElastic::calculateVectorImpl"] --> C;
```

The diagram illustrates a dependency or call relationship. Two source functions, 'Ikarus::NonLinearElastic::calculateMatrixImpl' and 'Ikarus::NonLinearElastic::calculateVectorImpl', are shown on the left. Arrows from both of these functions point to a single target function, 'Ikarus::NonLinearElastic::stress', which is highlighted with a gray background. This suggests that the 'stress' function is a common entry point or a function that is called by both the matrix and vector calculation functions.
