

Ikarus::NonLinearElastic
::calculateMatrixImpl

Ikarus::NonLinearElastic
::calculateScalarImpl

Ikarus::NonLinearElastic
::calculateVectorImpl

Ikarus::NonLinearElastic
::strainFunction

```
graph LR; A["Ikarus::NonLinearElastic::calculateMatrixImpl"] --> D["Ikarus::NonLinearElastic::strainFunction"]; B["Ikarus::NonLinearElastic::calculateScalarImpl"] --> D; C["Ikarus::NonLinearElastic::calculateVectorImpl"] --> D;
```

The diagram illustrates a design pattern where three different implementation methods (calculateMatrixImpl, calculateScalarImpl, and calculateVectorImpl) are used to populate a single strainFunction. Each method is represented in a white box on the left, and the target strainFunction is in a grey box on the right. Blue arrows indicate the flow of data from each implementation method to the strainFunction.
